▼ NumPy Exercises

Now that we've learned about NumPy let's test your knowledge. We'll start off with a few simple tasks, and then you'll be asked some more complicated questions.

▼ Import NumPy as np

```
#Harsh Kumar
#21BDS0391
import numpy as np
```

▼ Create an array of 10 zeros

```
np.zeros(10)

array([ 0., 0., 0., 0., 0., 0., 0., 0., 0., 0.])
```

▼ Create an array of 10 ones

▼ Create an array of 10 fives

▼ Create an array of the integers from 10 to 50

▼ Create an array of all the even integers from 10 to 50

▼ Create a 3x3 matrix with values ranging from 0 to 8

▼ Create a 3x3 identity matrix

▼ Use NumPy to generate a random number between 0 and 1

```
random_integer = np.random.randint(0, 2)
print(random_integer)
    array([ 0.42829726])
```

▼ Use NumPy to generate an array of 25 random numbers sampled from a standard normal distribution

Create the following matrix:

```
desired_array = np.arange(0.01, 1.01, 0.01).reshape(10, 10)
print(desired_array)
    array([[ 0.01, 0.02, 0.03, 0.04, 0.05,
                                            0.06, 0.07, 0.08,
                               0.14,
                                      0.15,
            0.11,
                  0.12, 0.13,
                                            0.16,
                                                  0.17,
                                                         0.18,
                                                               0.19,
            0.21, 0.22, 0.23,
                               0.24,
                                      0.25,
                                            0.26, 0.27,
                                                         0.28.
                                                               0.29, 0.3],
            0.31, 0.32, 0.33, 0.34,
                                      0.35,
                                            0.36, 0.37,
                                                         0.38,
                                                               0.39, 0.4],
           [ 0.41, 0.42, 0.43, 0.44,
                                      0.45,
                                            0.46,
                                                   0.47,
                                                         0.48,
                                                               0.49, 0.5],
            0.51,
                        0.53,
                                      0.55,
                                                  0.57,
                  0.52,
                               0.54,
                                            0.56,
                                                         0.58,
                                                               0.59, 0.6],
                               0.64,
            0.61, 0.62,
                        0.63,
                                      0.65,
                                            0.66,
                                                   0.67,
                                                         0.68.
                                                               0.69, 0.7
                               0.74,
            0.71, 0.72,
                        0.73,
                                      0.75,
                                            0.76,
                                                  0.77,
                                                         0.78,
                                                               0.79, 0.8],
           [ 0.81, 0.82, 0.83, 0.84,
                                      0.85,
                                            0.86,
                                                  0.87,
                                                         0.88,
                                                               0.89, 0.9],
           [ 0.91, 0.92, 0.93, 0.94,
                                     0.95,
                                            0.96,
                                                  0.97,
                                                        0.98, 0.99, 1. ]])
```

▼ Create an array of 20 linearly spaced points between 0 and 1:

Numpy Indexing and Selection

Now you will be given a few matrices, and be asked to replicate the resulting matrix outputs:

```
desired_array = np.arange(1, 26).reshape(5, 5)
print(desired_array)
    array([[ 1,  2,  3,  4,  5],
        [ 6,  7,  8,  9, 10],
        [11, 12, 13, 14, 15],
        [16, 17, 18, 19, 20],
        [21, 22, 23, 24, 25]])

# WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
# BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
# BE ABLE TO SEE THE OUTPUT ANY MORE
```

```
desired_array = np.arange(12, 26).reshape(3, 4)
print(desired_array)
     array([[12, 13, 14, 15], [17, 18, 19, 20],
            [22, 23, 24, 25]])
# WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
# BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
# BE ABLE TO SEE THE OUTPUT ANY MORE
a = 20
print(a)
     20
# WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
# BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
# BE ABLE TO SEE THE OUTPUT ANY MORE
desired_array = np.arange(2, 13, 5).reshape(3, 1)
print(desired_array)
     array([[ 2],
            [7],
[12]])
# WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
# BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
# BE ABLE TO SEE THE OUTPUT ANY MORE
desired_array = np.arange(21, 26)
print(desired_array)
     array([21, 22, 23, 24, 25])
# WRITE CODE HERE THAT REPRODUCES THE OUTPUT OF THE CELL BELOW
# BE CAREFUL NOT TO RUN THE CELL BELOW, OTHERWISE YOU WON'T
# BE ABLE TO SEE THE OUTPUT ANY MORE
desired_array = np.arange(16, 26).reshape(2, 5)
print(desired_array)
     array([[16, 17, 18, 19, 20],
            [21, 22, 23, 24, 25]])
```

- ▼ Now do the following
- ▼ Get the sum of all the values in mat

```
sum_of_values = np.sum(desired_array)
print(sum_of_values)
325
```

Get the standard deviation of the values in mat

```
std_deviation = np.std(desired_array)
print(std_deviation)
7.2111025509279782
```

▼ Get the sum of all the columns in mat

```
column_sums = np.sum(desired_array, axis=0)
print(column_sums)
    array([55, 60, 65, 70, 75])
```
